water conservation

All Automatic Irrigation Systems Must Have a Smart Irrigation Controller Installed

The January 1, 2025 deadline has passed! All automatic irrigation systems in the PWWD must now be fitted with a smart irrigation controller.

What Are the Benefits of a Smart Sprinkler System?

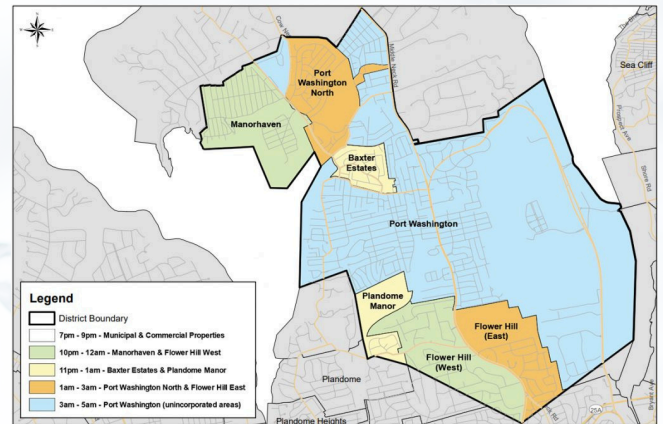

- According to a Cornell study, users save up to 40% on their water usage after installing their smart sprinkler systems, helping their natural environment as well as their wallet
- WiFi connections allow them to read local weather forecasts
- Sensors are able to detect the exact amount of moisture that is in the ground
- Systems are able to read exactly how much water your lawn needs to stay green and healthy without overwatering

Standard vs Smart Irrigation Water Consumption of PWWD Customers

PWWD Irrigation Regulations

- The PWWD has set up an Automatic Irrigation Zone Map, indicating when residents can irrigate their lawns based on the area in which their property lies:

- Residents must also follow Nassau County's Odd/Even Lawn Watering Ordinance:
 - Odd-numbered homes can water on odd calendar days
 - Even-numbered homes and those without numbers can water on even calendar days
 - No watering from 10 a.m. to 4 p.m.
- If you manually irrigate, restrict watering to 15 minutes per area with a maximum water of two hours
